

The only way is up!

English at the Technical Vocational College Coburg.

Technical English is an essential skill for mechanical and electrical engineering students at a technical college. As English is the lingua franca of the engineering world, it is vital for technicians, mechanics and electricians to be able to communicate effectively with colleagues and customers from different countries.

Improving English can be a fun and exciting experience, especially when it comes to technical knowledge. By mastering technical English, technicians, mechanics and electricians can expand their knowledge and keep up with the latest developments in their field. This can lead to greater success in both work and life, as professionals can communicate their ideas and solutions more effectively.

In addition, passing the KMK Certificate Examination in English can be a valuable document for special qualifications. This can open up new opportunities for technicians, mechanics and electricians, such as working for international companies or collaborating with colleagues from different countries.

The certificate examination is open to all students in the respective training fields.

In 2023, 13 successful candidates, from the Vocational School and the Technical College for Mechanical Engineering, took the KMK examination (level B1 and/or B2) for their profession.

This is a pleasing upward trend in the acceptance of our future-oriented offer for students.

Congratulation to all our successful graduates.

You've made it.
